Live Tracking Guide

MotionX-GPS

Introduction

This year's event we are going to trial live tracking. This is achieved with the use of the MotionX-GPS app. This app is only available for iOS (iPad/iPhone) users and requires an upfront purchase plus data usage on the day.

Download

You will need to head to the app store on your iOS device and search for MotionX-GPS (or MotionX-GPS HD on iPad) and purchase the app.
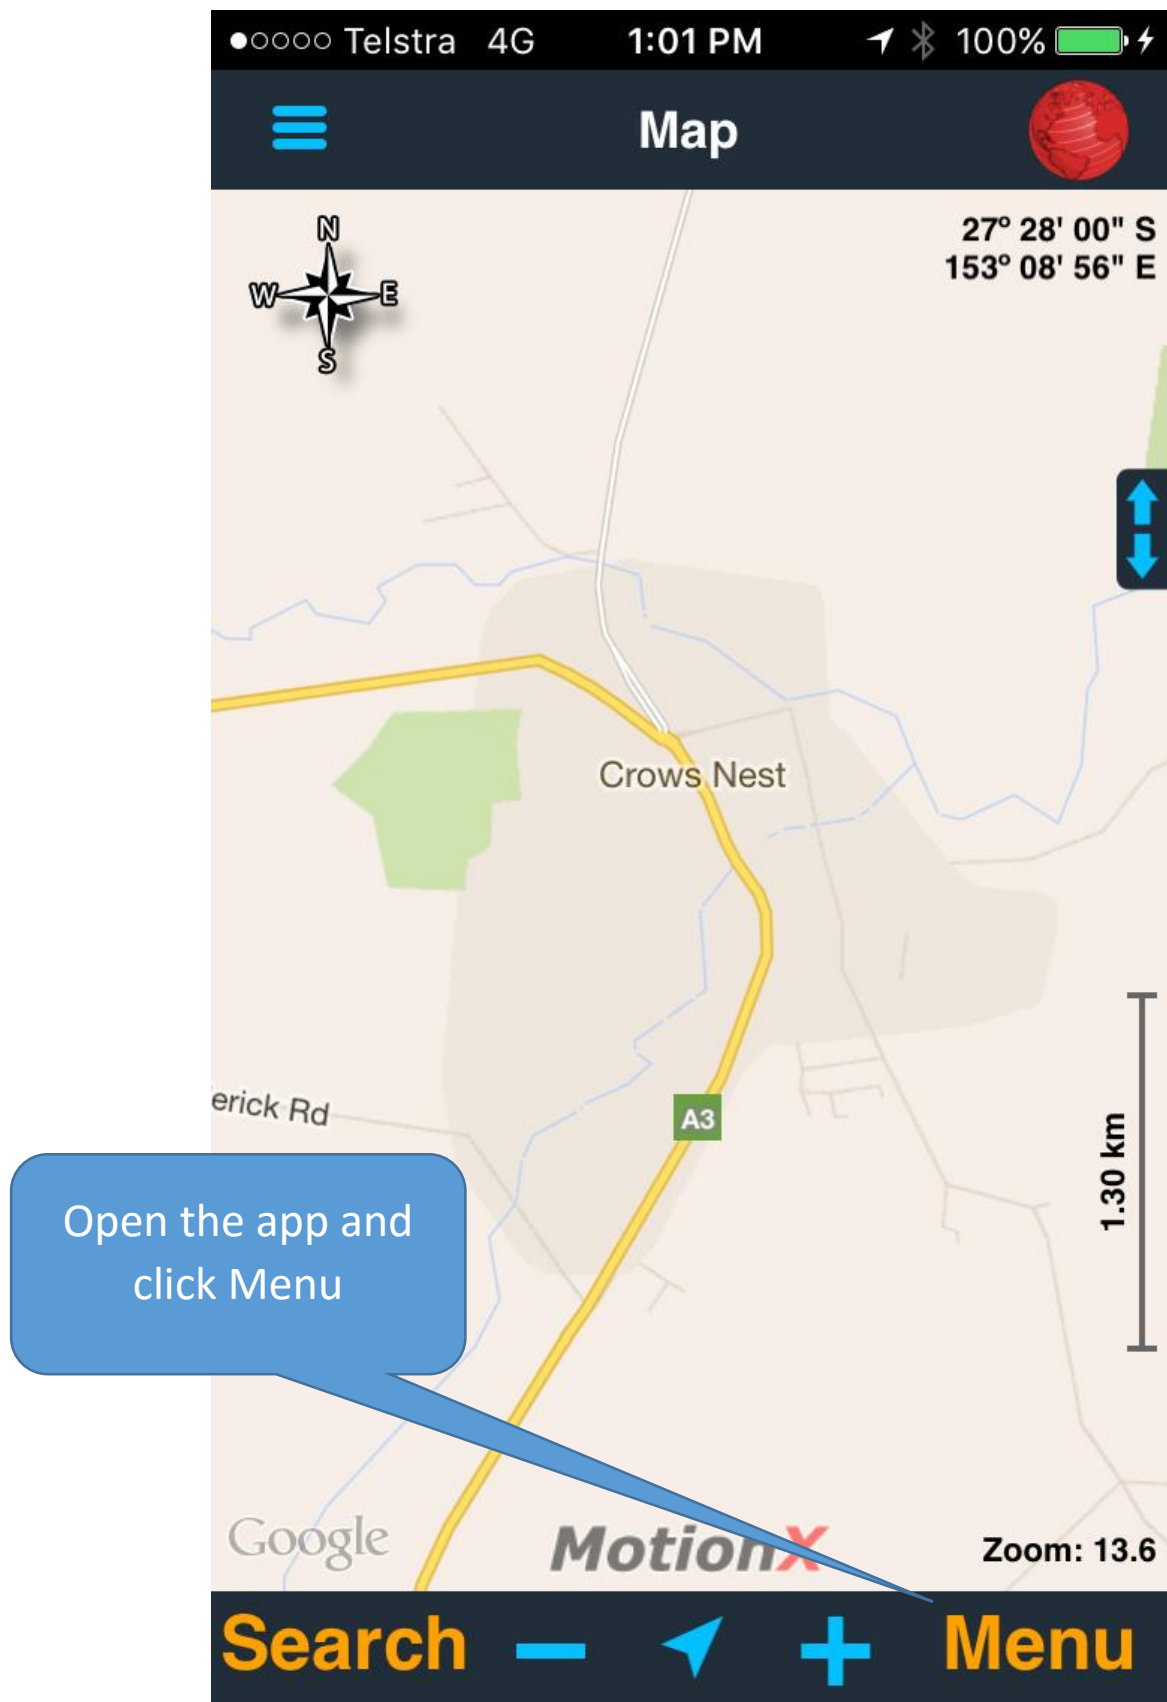

I would recommend before the event that you have a play with the app to familiarise yourself with it.
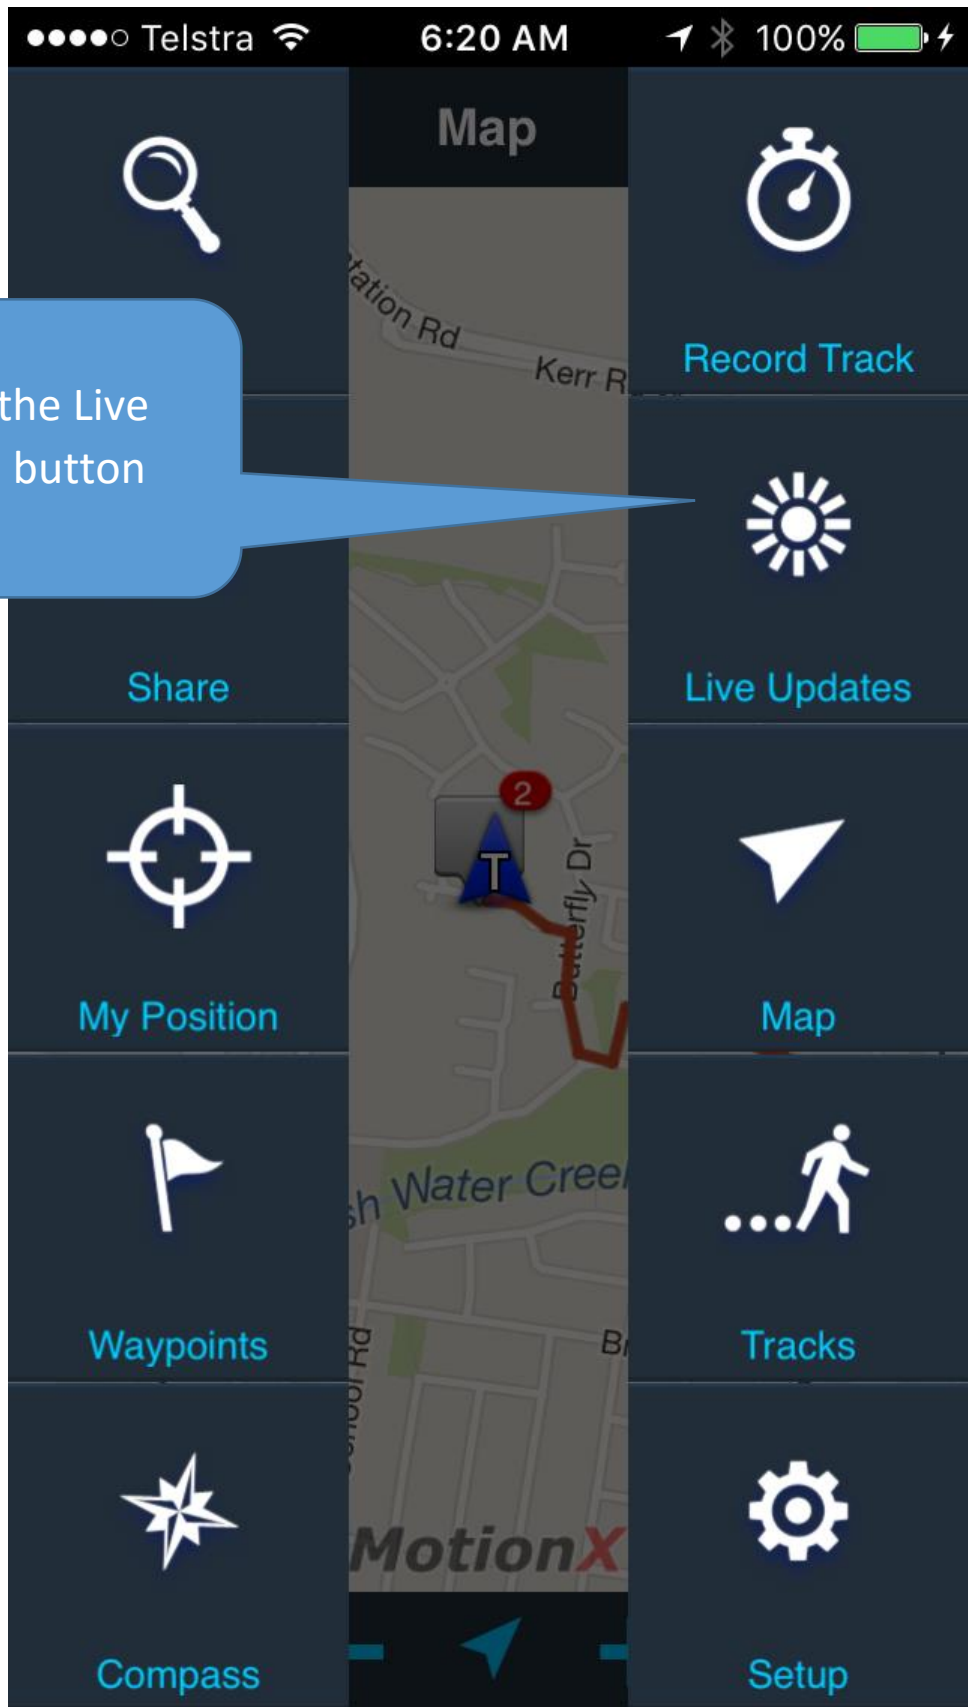

This is a very well featured piece of software for the price, you could run the whole event from here alone if you chose to do so, but only if you are familiar with it.

Have a good look through the app as you can pre-download the maps you want for the event, there are several ones to choose from. You can also load up the event GPX file so that you can see all the waypoints coming up, plus there are numerous tools available for searches, measuring, track recording etc.

Open the app and click Menu

Click on the Live Updates button
